my principle strategy for trading weekly index options uses 2 sigma iron condors short calls 2 standard deviations above the market and the long calls the next strike price higher short puts 2 standard deviations below the market and the long puts the next strike price lower this is called 2 sig iron condors i have developed a procedure to make a weekly profit using iron condors my objective is to show you how to make a weekly profit of 150 week with 2 condors as your capital increases with trading profits then you increase the number of condors then your weekly profit increases as the capital grows for example if the capital in your broker account permits 4 condors then the weekly profit would increase to 300 per week the weekly profit per capital 150 2000 75 per week selfadapspxweeklyvly is the name of my software which i use to generate weekly profits this book describes how to use the trademonster real time spx weekly option quotes my software selfadapspxweeklyvly computes the strike prices used for the weekly option trades if you have another source for real time spx weekly option quotes then that source can be used instead of the

trademonster source you must have a minimum of 2000 in your broker account to do weekly iron condor trading this book recommends starting with 2500 and presents a capital growth model that shows that using the trading procedure herein this initial capital of 2500 could grow to 300 000 in 2 years weekly index options became available on the chicago board of options exchange in 2003 i have watched this type of options trading evolve as more investors used weekly trading i have changed my trading software to reflect this evolution i made my software simpler by limiting it to spx for the weekly options trading

the behavior of the us and world stock markets is caused by fear of the big traders on days when the market suffers a loss greater than 2 sigma by hope when the market enjoys an increase greater than 2 sigma and changes very little when the big traders are cautious during a trading day to cause wealth to grow we must use options trading strategies that make profits and limit or avoid losses when the market makes sudden erratic movements as well my software program selfadaptjonweeklycntrs has evolved during the last 25 years of options trading by your author dr jon schiller starting with a london broker trading ftse 100 options placing orders by fax ending with tradeking broker placing orders using their trading automated website i modified my software during my 25 years of trading to change as the market changed i started using naked index option spreads which requires 50k in your options account i modified the strategy to use covered index option spreads which capital in your options account based on the number of spreads and the strike price spacing i tried wwi triggered debit spreads i switched to condors simultaneous call and put 2 sigma spreads then a few years ago when weekly options became available from the.cboe i switched to 2 sigma weekly options using condors as the best way to make wealth grow the best weekly options to consider for

trading by sorting thru the indices and stocks tracked by my old software i found there were several weekly options that were worth tracking in today s market the new software program is selfadaptionweeklycntrs which uses the strategies tools described in this book the excel based software uses.cboe quotes for the options data and computes the 2 sigma values for the stocks indices tracked in the software presents the option iron condors for the same stocks indices the main option strategy is to use weekly options which become available with market open on thursday for expiration on friday a week and one day after the options become available the neural network signal indicator using 6 signal indicators to compute the market trends to show when the market is probable to change direction every 3rd friday of each month the monthly options expire therefore on the second friday of the month there is only a week left in the trading month so all stock options become weekly options so you may select the best of all the stocks for the weekly condor to open on the friday or monday before the 3rd friday i should point out that almost every week the spy condors become best using return on margin as the metric i use tradeking as a broker for two reasons their commissions are the lowest of the brokers i know about their website is automated so placing the condor or other type option orders is easy to do just select the strategy to use the automated website will appear and enter the parameters for the option if you get your capital to grow above 50 000 some brokers will allow you place naked spread orders in which you sell the 2 sigma call and 2 sigma put for a spread with tradeking you must place a pseudo naked spread a strategy i will describe in chapter 5
