this textbook contains the theory and some applications of the rank metric codes developed by the author and called gabidulin codes by the scientific community a matrix code  $C$  is a set of matrices codewords of fixed size over a finite field the code is considered in the rank metric that is defined as follows the distance between two matrices is the rank of their difference the code distance of a code  $C$  is the minimum distance between different code matrices given a metric the main directions of coding theory are to design codes with a maximum number of codewords for a fixed code distance to obtain the properties of the codes to construct efficient decoding algorithms that find a code matrix nearest to a given matrix this book can be recommended to students and researchers working with rank metric codes

this book constitutes the refereed proceedings of the 4th international conference on algebraic informatics cai 2011 held in linz austria in june 2011 the 12 revised full papers presented together with 4 invited articles were carefully reviewed and selected from numerous submissions the papers cover topics such as algebraic semantics on graph and trees formal power series syntactic objects algebraic picture processing finite and infinite computations acceptors and transducers for strings trees graphs arrays etc decision problems algebraic characterization of logical theories process algebra algebraic algorithms algebraic coding theory and algebraic aspects of cryptography

in may 2003 two events were held in the cirm marseille luminy devoted to arithmetic

geometry and their applications in coding theory and cryptography a european school algebraic geometry and information theory and the 9th international conference arithmetic geometry and coding theory some of the courses of the conferences are published in this volume topics covered include abelian varieties function fields and curves over finite fields galois group of pro  $p$  extensions dedekind zeta functions of number fields numerical semigroups waring numbers bilinear complexity of the multiplication in finite fields and class number problems

spreadsheets in structural design provides a unique and highly practical explanation of the use of spreadsheets to facilitate the design of structures in a range of key materials such as concrete steel and brick using spreadsheets in this way has important implications in terms of cost and efficiency and represents a very useful tool hitherto largely neglected by the design community each chapter contains spreadsheet layouts to illustrate the method drawn from different areas of design and using a range of materials and codes of practice examples used relate to reinforced concrete reinforced masonry and steel but the approach is easily extended to other materials and other fields of design practising structural engineers civil engineers and architects will find this book an invaluable guide for the solution of routine design problems it is also useful reading for advanced undergraduate and postgraduate students of structural design civil engineering and architecture

this ima volume in mathematics and its applications coding theory and design theory part i coding theory is based on the proceedings of a workshop which was an integral part of the 1987 88 ima program on applied combinatorics we are grateful to the scientific committee victor klee chairman daniel kleitman dijen ray chaudhuri and dennis stanton for planning and implementing an exciting and stimulating year long program we especially thank the workshop organizer dijen ray chaudhuri for organizing a workshop which brought together many of the major figures in a variety of research fields in which coding theory and design theory are used a vner friedman willard miller jr preface coding theory and design theory are areas of combinatorics which found rich applications of algebraic structures combinatorial designs are generalizations of finite geometries probably the history of design theory begins with the 1847 paper of reverend t p kirkman on a problem of combinatorics cambridge and dublin math journal the great statistician r a fisher reinvented the concept of combinatorial 2 design in the twentieth century extensive application of algebraic structures for construction of 2 designs balanced incomplete block designs can be
