if at one time we thought that the movement to science would yield unification of the discipline it is now apparent that there are many roads to science still it is important for us to consider yet again what the appropriate goals are for our scientific enterprise what works in theory building induction and deduction prediction and control the search for useful principles to guide us oco examining these questions we can build a better science political science has come so far as a discipline that different schools and scholars have different interpretations of science in the study of politics and that diversity is important to maintain advances made in the study of political institutions and behavior are described in twelve essays from the 1983 annual meeting of the american political science association addressing they do not employ any single approach to the study of the science of politics taken as a whole they illustrate the multiplicity of interpretations that are presently given to the common enterprise

nuclear energy stem cell technology gmos the more science advances the more society seems to resist but are we really watching a death struggle between opposing forces as so many would have it can today s complex technical policy decisions coincide with the needs of a participatory democracy are the two sides even equipped to talk to each other beyond technocracy science politics and citizens answers these questions with clarity and vision drawing upon a broad range of data and events from the united states and europe and noting the blurring of the expert lay divide in the knowledge base the book argues that these conflicts should not be dismissed as episodic or the outbursts of irrationality and ignorance but recognized as a critical opportunity to discuss the future in which we want to live massimiano bucci s analysis covers the complex realities of post academic science as he explores the widely debated theme of science and democracy across a broad range of technological controversies overviews issues raised by the current relationship among scientists policymakers business interests and the public dispels stereotypes of the detached scientific community versus the uninformed general public examines the role of the media in framing scientific debate addresses the question of how to move beyond technocracy to a more fruitful collaboration between scientists and citizens offers a bold vision for a future in which the scientific and public spheres regard each other as partners working toward a shared purpose beyond technocracy science politics and citizens has great value as a postgraduate text for courses in technology and society political science and science policy it will also find an interested audienceamong scientists policymakers managers in the technological sector and concerned lay readers

problematic when americans abandon rationality for ideology or misinformation manufactured to confuse and persuade them in a series of five contemporary examples when science and politics collide the public interest at risk makes the case that none of the ways in which science and politics currently communicate serve the public interest and that some of them actually result in great harm it explains that whether about climate change vaccines pandemics or fracking experimentally proven and reproducible data and evidence can save lives and poor politically motivated policies can doom them the book concludes with recommendations for creating a more perfect union between scientific facts and political agendas

an excerpt from the first chapter the history of political science science of greek philosophy before we enter on the history it may be as well to take a rough general view of the place of the theory of politics in human knowledge many persons would perhaps deny that there is any science of politics at all if they meant that there is no body of rules from which a prime minister may infallibly learn how to command a majority they would be right as to the fact but would betray a rather inadequate notion of what science is there is a science of politics in the same sense and to the same or about the same extent as there is a science of morals whatever systematic moralists may have professed to think it is at least doubtful whether systems of moral philosophy have been of much direct use in helping people to decide actual questions of conduct for my own part i would in a case of conscience rather consult a right minded and sensible friend than any moral philosopher in the world i should think neither the better nor the worse of his advice if he happened also to be a student of philosophy nevertheless few educated persons will refuse to admit that inquiry into the nature and origin of moral rules is legitimate and useful or will maintain that the endeavour to refer them historically or rationally to general principles is altogether idle men being moral beings are led to reflect on the nature of right and wrong and the functions of conscience being citizens they are equally led to reflect on the nature of the state the functions of government and the origin and authority of civil obligation this latter inquiry is indeed more practical than the other for political theories of the most general kind often have considerable direct influence in public affairs which cannot i think be said of ethical theories the declaration of the rights of man by the french constituent assembly has certainly not been without practical effect it consists of general statements of what men as men are entitled to and may justly demand if true the statements are of the utmost importance to politicians and legislators if false they are highly mischievous in either case they purport to be propositions of political science m barthélemy st hilaire informed the world in 1848 that they were the crown and sum of all the political science of all former ages claiming such authority and having in fact influenced men s minds the principles thus enounced cannot be merely disregarded and it is scientific criticism that must establish or refute them to the persons who deny the necessity or possibility of philosophy it is a sufficient answer that at all events critical philosophy is needful for the exposure of philosophies falsely so called and in the same way political science must and does exist if it were only for the refutation of absurd political theories and projects

scientists have a choice concerning what role they should play in political debates and policy formation particularly in terms of how they present their research this book is about understanding this choice what considerations are important to think about when deciding and the consequences of such choices for the individual scientist and the broader scientific enterprise rather than prescribing what course of action each scientist ought to take the book aims to identify a range of options for individual scientists to consider in making their own judgments about how they would like to position themselves in relation to policy and politics using examples from a range of scientific controversies and thought provoking analogies from other walks of life the honest broker challenges us all

scientists politicians and citizens to think carefully about how best science can contribute to policy making and a healthy democracy
