early medieval astronomy esp in the era of charlemagne his successors consisted of texts that went far beyond the boundaries of computus which modern scholars have long believed to be the only significant context for astronomical studies of that time the texts contained innovative diagrams where no other sign of divergence from the text could be seen such diagrams were found to provide an indication of understandings of the texts which were different from those of modern scholars contents astronomy its teaching in carolingian europe functions locations of planetary diagrams sources topics of planetary diagrams plinian diagrams macrobian diagrams calcidian diagrams capellan diagrams illus this is a print on demand publication

the monograph presents an outline of the methods used to predict the performance of lenses from an analysis of their designs the technique is based on the use of spot diagrams which are analogs of star image tests and makes extensive use of high speed digital computers a collection of twenty one spot diagram analyses is included author

at last geochemists are offered one comprehensive reference book which gives the eh ph diagrams for 75 elements found in the earth s surface environment including transuranic and other radioactive species for each of these newly calculated diagrams short explanatory texts are added for the first time the primary elements are considered in water with metal sulfur carbon and other species as appropriate furthermore based on these figures and up to date thermodynamic data presented in this reference researchers can predict the behavior of elements in the surface environment geoscientists chemists and environmental agencies will also benefit from several brief texts on the importance of various elements to problems of radioactive waste disposal

the most comprehensive collection of time temperature diagrams for irons and steels ever collected between this volume and its companion atlas of time temperature diagrams for nonferrous alloys you ll find the most comprehensive collection of time temperature diagrams ever collected containing both commonly used curves and out of print and difficult to find data these atlases represent an outstanding worldwide effort with contributions from experts in 14 countries time temperature diagrams show how metals respond to heating and cooling allowing you to predict the behavior and know beforehand the sequence

the effectiveness of a magnetic field in stabilizing the laminar flow of an incompressible electrically conducting fluid is studied the neutral stability curves pertaining to a two dimensional sinusoidal disturbance are presented for flow over a semi infinite flat plate in the presence of either a coplanar or transverse magnetic field and for channel flow in the presence of a coplanar magnetic field as is to be expected the magnetic field stabilizes the flow unless the velocity profile is distorted by the magnetic field to an inherently unstable shape this occurs when a transverse magnetic field is fixed relative to a semi infinite flat plate

the book summarizes the author's experimental studies of phase relations in the chemical systems relevant to earth carried out in a time period of over 20 years using piston cylinder and multi anvil presses a summary of the research at high pressures and temperatures carried out by many other experimental petrologists is also included the data was used to develop an internally consistent thermodynamic model which was then used to calculate phase diagrams this produced the largest collection of the calculated phase diagrams published so far encompassing for the first time the temperature and pressure ranges corresponding to the whole upper mantle
