this work looks at the problematic relationship between the philippines and the us it argues that when faced with a national crisis or a compelling need to reestablish its autonomy each nation paradoxically turns to its history with the other to define its place in the world

there is little in the public domain about this élite international high iq society mensa which boasts a membership tested to have an iq among the highest two per cent of the population this book was written by an insider who as a member of mensa contributed extensively to this high iq society over a span of almost thirty years mensa was originally conceived of as a third pillar intended to complement the royal society and the british academy when it was founded in oxford during 1946 its original goal was to gather six

hundred of the most intelligent people in Britain as scientifically measured through an IQ test who the government and its agencies could contact for advice on matters of government. It had two purposes: first to conduct research in psychology and social science and secondly to provide contact between intelligent people everywhere in the world. The intention was for Mensa to conduct three strands of research: to test intelligence tests and identify correlations with intelligence; Mensans as the subjects of research; the Mensan as an instrument of research, i.e. where they themselves chose areas of interest to research and write reports on them. This book reveals some of the research conducted on or by Mensans over the intervening seventy years under its first president, Sir Cyril Burt. Mensa systematically conducted research on thousands of its members from 1946 until the death of the esteemed British psychologist in 1971. Burt's research was challenged after his death, but it is debatable whether his detractors were fully aware of his Mensa research. Mensa was conducting big data research long before it became fashionable during the 21st century with the advent of powerful computers, and much of this research was made available to government departments at the time.

Between June 6-10, 1988, the third Chemical Congress of North America was held at the Toronto Convention Center. At this rare gathering, fifteen thousand scientists attended various symposia. In one of the symposia, Professor Pierre Gilles de Gennes of Collège de France was honored as the 1988 recipient of the American Chemical Society Polymer Chemistry Award, sponsored by Mobil Chemical Corporation. For Professor de Gennes, this international setting could not be more fitting. For years, he has been a friend and a lecturer to the world scientific community. Thus, for this special occasion, his friends came to recount many of his achievements or report new research findings, mostly derived from

his theories or stimulated by his thoughts in this volume of proceedings titled new trends in physics and physical chemistry of polymers we are glad to present the revised papers for the symposium and some contributed after the symposium in addition we intend to include most of the lively discussions that took place during the conference this volume contains a total of thirty six papers divided into six parts primarily according to the nature of the subject matter adsorption of colloids and polymers adhesion fractal and wetting of polymers dynamics and characterization of polymer solutions diffusion and interdiffusion of polymers entanglement and reptation of polymer melts and networks phase transitions and gel electrophoresis
