recently many us employers have adopted less generous prescription drug benefits in addition the u s began to offer prescription drug insurance to approximately 42 million medicare beneficiaries in 2006 we use data on individual health insurance claims and benefit data from 1997 2003 to study the effects of changing consumers co payments for prescription drugs on the quantity demanded and expenditure on prescription drugs inpatient care and outpatient care we allow for effects both in the year of the co payment change and in the year following the change our results show that increases in prescription drug prices reduce both the use of and spending on prescription drugs however consumers substitute the use of outpatient care and inpatient care for prescription drug use and the

expenditure reductions on prescription drugs are largely offset by the increases in other spending national bureau of economic research web site
